# BenefitMall Express Applications Offers the Very Best in Security

The health care industry is rapidly moving from its current paper-based process —which is both inefficient and less secure than an online system— to a technology-based system for employees to complete required underwriting and enrollment forms. **BENEFITMALL is dedicated to making sure that your online health care information is kept private and secure.**

Inevitably, as we move into the online world, employers and their employees are rightfully concerned about protecting their information and keeping it safe online. **EXPRESS APPLICATIONS** not only maintains better control of your data than paper-based methods, but it also helps protect sensitive personal information by limiting access to authorized personnel. And for the broker, employer and employee, entering information just once within a single, comprehensive online resource platform is a huge benefit that saves both time and money.

Express Applications is secured and encrypted using SSL and conforms to SOC 2 (Service Organization Controls 2) standards.

DATA SECURITY

All access to Express Applications is secured and encrypted using SSL (Secure Sockets Layer). Additionally, backups are encrypted, securely transported and securely stored. System users are tracked for full accountability via detailed audit trails, and password policies are strictly enforced and based on best practices.

EQUIPMENT AND FACILITIES

Express Applications is located in a highly secure, purpose-built data center that completed a SOC 2 (Service Organization Controls 2) audit covering security, availability, processing integrity and confidentiality, to ensure that PlanSource has the very best data center security in place.

SOFTWARE

Express Applications' software incorporates well-proven mechanisms to protect against outside attacks. Role-based security offers the ability to restrict administrator access to menu items, groups of employees and specific sensitive data elements, which provides employers with an extra level of control for employee information.

PEOPLE AND PROCESSES

BenefitMall and PlanSource's employees are trained to protect your data, and security aspects of its software development, IT management and operational processes are aligned with ISO27001 and ISO27002 security standards.

The EXPRESS APPLICATIONS platform was built for health care industry and is HIPAA compliant. BenefitMall and PlanSource take responsibility to safeguard sensitive data seriously and leverage the very best in technology to provide its broker partners, their employer customers and individual employees with a protected, online system that makes benefits underwriting and enrollment easy, powerful — and above all, secure.
